Important safety instructions

Your projector is designed and tested to meet the latest standards for safety of information technology equipment. However, to ensure safe use of this product, it is important that you follow the instructions mentioned in this manual and marked on the product.

General safety instruction

1. Do not look straight at the projector lens during operation. The intense light beam may damage your eyes.
2. Always open the lens shutter or remove the lens cap when the projector light source is on.
3. In some countries, the line voltage is NOT stable. This projector is designed to operate safely within a mains voltage between 100 to 240 volts AC, but could fail if power cuts or surges of ±10 volts occur. In areas where the mains voltage may fluctuate or cut out, it is recommended that you connect your projector through a power stabilizer, surge protector or uninterruptible power supply (UPS).
4. Do not block the projection lens with any objects when the projector is under operation as this could cause the objects to become heated and deformed or even cause a fire. To temporarily turn off the light source, press **ECO BLANK** on the remote control.
5. Do not place this product on an unstable cart, stand, or table. The product may fall, sustaining serious damage.
6. Do not attempt to disassemble this projector. There are dangerous high voltages inside which may cause death if you should come into contact with live parts.
    Under no circumstances should you ever undo or remove any other covers. Refer servicing only to suitably qualified professional service personnel.
7. Do not place this projector in any of the following environments.
    *   Space that is poorly ventilated or confined. Allow at least 50 cm clearance from walls and free flow of air around the projector.
    *   Locations where temperatures may become excessively high, such as the inside of a car with all windows rolled up.
    *   Locations where excessive humidity, dust, or cigarette smoke may contaminate optical components, shortening the projector's life span and darkening the image.
    *   Locations near fire alarms
    *   Locations with an ambient temperature above 40°C / 104°F
    *   Locations where the altitudes are higher than 3000 m (10000 feet).
8. Do not block the ventilation holes.
    *   Do not place this projector on a blanket, bedding or any other soft surface.
    *   Do not cover this projector with a cloth or any other item.
    *   Do not place inflammables near the projector.
    If the ventilation holes are seriously obstructed, overheating inside the projector may result in a fire.

9. Do not step on the projector or place any objects upon it. Besides probable physical damage to the projector, doing so may result in accidents and possible injury.

10. Do not place liquids near or on the projector. Liquids spilled into the projector may cause it to fail. If the projector does become wet, disconnect it from the power supply's wall socket and call BenQ to have the projector serviced.
This equipment has a three-pin grounding-type power plug. Do not remove the grounding pin. As a safety feature, this plug will only fit a grounding-type power outlet. If you are unable to fit the plug into the outlet, contact an electrician.

Do not remove

Notice on laser

This symbol indicates that there is a potential hazard of eye exposure to laser radiation unless the instructions are closely followed.

Laser class

(for USA) This Laser Product is designated as Class 3R during all procedures of operation and complies with IEC/EN 60825-1:2007.
(for WW) This Laser Product is designated as Class 1 and CONSUMER LASER PRODUCT: EN 50689:2021 during all procedures of operation and complies with IEC 60825-1:2014 and EN 60825-1:2014/A11:2021.
LASER LIGHT - AVOID DIRECT EYE EXPOSURE.
Do not point laser or allow laser light to be directed or reflected toward other people or reflective objects.
Direct or scattered light can be hazardous to eyes and skin.
There is a potential hazard of eye exposure to laser radiation if the included instructions are not followed.
Caution – use of controls or adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.

Laser parameters

Wavelength	450nm - 460nm (Blue)
Mode of operation	Pulsed, due to frame rate
Pulse width	1.34ms
Pulse repetition rate	120Hz
Maximum laser energy	0.698mJ
Total internal power	>100w
Apparent source size	>10mm, at lens stop
Divergence	>100 mili Radian

Laser light instruction

Below drawing is the laser aperture location. Be careful not to let the eye see the light directly.

Laser aperture
Interlock switches

This machine has 1 (Top cover x 1) Interlock switches to protect the laser light Leakage.

• Will power-off the system individually when the top cover is removed.

Interlock
switches
Prepare for installation

Cooling notice

Allow at least 50 cm (19.7 inch) for clearance around the exhaust vent. Make sure no objects block air input within 30 cm (11.8 inch).
Keep the outlet at least 1 m away from the inlets of other projectors.

Air inlet

Air inlet

Air outlet
- The projector can be installed at any angle.

- Allow at least 50 cm of clearance around the exhaust vent.

Minimum 50 cm
(19.69 inch)

Minimum 30 cm
(11.81 inch)

Minimum 50 cm
(19.69 inch)
- Ensure that the air intake vents do not recycle hot air from the exhaust vent.
- When operating in an enclosed space, make sure that the surrounding air temperature does not exceed the projector's operating temperature and that the air intake and exhaust vents are unobstructed.
- All enclosures should pass a certified thermal evaluation to ensure that the projector does not recycle exhaust air. Recycling exhaust air may cause the projector to shutdown even if the ambient temperature is within the acceptable operating temperature range.

Caution:

To avoid damaging the DLP chips, never aim a high-power laser beam into the projectiom lens.

Package contents

Standard packing items

Projector	Remote control	Batteries	Quick Start Guide

Power cable	VGA cable	Warranty card
Optional accessories

1. Ceiling mount kit
2. 3D glasses
3. QCast (QP01), InstaShow™ (WDC10)
4. Dust filter

* The warranty card is only supplied in some specific regions. Please consult your dealer for detailed information.

Introduction

Projector exterior view

Front and upper side view
1. POWER indicator light
2. TEMPerature indicator light
3. LIGHT indicator light
4. Control panel
5. Front adjuster foots
6. Front vent (cool air intake)
7. Front IR remote sensor
8. Projection lens
9. Side vent (cool air intake)

Rear and upper side view
10. AC power cord inlet
11. Control terminals
12. Rear IR remote sensor
13. Vent (cool air outtake)

Controls and functions

Control panel
- (power icon) **Power**
  Toggles the projector between standby mode and on. See "Switch on the projector" on page 29 and "Switch off the projector" on page 35 for details.

- **MENU**
  Turns on the On-Screen Display (OSD) menu. Goes back to previous OSD menu, exits and saves menu settings. See "Using the menu" on page 41 for details.

- **Increase Volume/Arrow keys ((volume icon) /◄ Left)**
  Increase the projector volume.

- **ECO BLACK**
  Hide the screen picture.

- **Keystone/Arrow keys (▼ /▲ Up)**
  When the On-Screen Display (OSD) menu is activated, the ▲, ▼, ◄, and ► keys are used as directional arrows to select the desired menu items and to make adjustments. See "Using the menu" on page 41 for details.

- **MODE/ENTER**
  Selects an available picture setup mode.
 Enacts the selected On-Screen Display (OSD) menu item. See "Using the menu" on page 41 for details.

- **Keystone/Arrow keys (▲ /▼ Down)**
  Manually corrects distorted images resulting from an angled projection.

- **AUTO**
  Automatically determines the best picture timings for the displayed image. See "Auto adjusting the image" on page 34 for details.

- **Decrease Volume/Arrow keys ((volume icon) /► Right)**
  Decreases the projector volume.

- **SOURCE**
  Displays the source selection bar.

Control terminal
- **HDMI 1**

  Connection to HDMI source.

- **HDMI 2**

  Connection to HDMI source.

- **HDMI 3/MHL**

  Connection to HDMI or MHL source.

- **MONITOR OUT**

  Connection to other display equipment for concurrent playback display.

- **PC**

  15-pin VGA port for connection to RGB, component HD source, or PC.

- **VIDEO**

  Connection to a video source.

- **3D SYNC**

  Connection to 3D IR sync signal transmitter.

- **SERVICE**

  Maintenance exclusive port for authorized maintenance personnel only.

- **USB 1.5A**

  Support 5V/1.5A output.

- **LAN**

  For connection to RJ45 Cat5/Cat6 Ethernet cable to control the projector through a network.

- **RS-232**

  Standard 9-pin D-sub interface for connection to PC control system and projector maintenance.

- **AUDIO IN**

  Connection to an audio input source via an audio cable.

- **AUDIO IN (L/R)**

  Connection to an audio input source via an audio or audio L/R cable.

- **AUDIO OUT**

  Connection to a speaker or headset.

  Note:

For more information about upgrading firmware via LAN, please contact BenQ service.

Remote control
- **ON / OFF**
  Toggles the projector between standby mode and on.

- **COMPUTER1/COMPUTER2/VIDEO/S-VIDEO/HDMI/NETWORK**
  Selects an input source for display. **HDMI** supports cycle switching between HDMI 1, HDMI 2 and HDMI 3/MHL input signals. Press **HDMI** repeatedly to switch the HDMI 1, HDMI 2 and HDMI 3/MHL input signals. (**COMPUTER2**, **S-VIDEO** and **NETWORK** are not available for this model)

- **MENU/EXIT**
  Turns on the On-Screen Display (OSD) menu. Goes back to previous OSD menu, exits and saves menu settings.

- **Arrow keys (▲ Up, ▼ Down, ◄ Left, ► Right)**
  When the On-Screen Display (OSD) menu is activated, the arrow keys are used as directional arrows to select the desired menu items and to make adjustments. See "Using the menu" on page 41 for details.

- **VOLUME +/VOLUME -**
  Increases/decreases the projector volume.

- **KEYSTONE+/KEYSTONE-**
  Manually corrects distorted images resulting from an angled projection.

- **ECO BLANK**
  Hide the screen picture.

- **MODE/ENTER**
  Selects an available picture setup mode. Activates the selected On-Screen Display (OSD) menu item.

- **AUTO**
  Automatically determines the best picture timings for the displayed image.

- **SOURCE**
  Displays the source selection bar.

- **LASER**
  Emits visible laser pointer light for presentation purposes.
- **MHL control buttons**
  Goes to the previous file/Plays/Pauses/Goes to the next file/Rewinds/Stops/Fastforwards during media playback. Only available when controlling your smart device in MHL mode. Key functions supports may vary with different intelligent devices.

- **ZOOM+/ZOOM-**
  Magnifies or reduces the projected picture size.

- **PAGE +/PAGE -**
  Operate your display software program (on a connected PC) which responds to page up/down commands (like Microsoft PowerPoint).

- **MIC/VOL +/MIC/VOL -**
  Microphone input level adjustment.
  (**MIC/VOL +** and **MIC/VOL -** are not available for this model)

- **FREEZE**
  Freezes the projected image.

- **ASPECT**
  Selects the display aspect ratio.

- **MUTE**
  Toggles projector audio between on and off.

- **NETWORK SETTING**
  Displays the Network Settings OSD menu.

- **QUICK INSTALL**
  Displays the **Quick Install** OSD menu.

- **SMART ECO**
  Switches the light source mode.

- **Numeric buttons**
  Enters numbers in network settings.
  Numeric buttons 1, 2, 3, 4 cannot be pressed when asked to enter password.

Operating the LASER pointer

The Laser Pointer is a presentation aid for professionals. It emits a beam of red light when you press it.
The laser beam is visible. It is necessary to press and hold LASER for continuous output.

✎ **Caution:**

Do not look into the laser light window or shine the laser light beam on yourself or others. See the warning messages on the back of the remote control prior to using it.
The laser pointer is not a toy. Parents should be mindful of the dangers of laser energy and keep this remote control out of the reach of children.

Remote control effective range

Infra-Red (IR) remote control sensor is located on the front and rear of the projector. The remote control must be held at an angle within 30 degrees perpendicular to the projector's IR remote control sensor to function correctly. The distance between the remote control and the sensor should not exceed 8 meters (~ 26 feet).

Make sure that there are no obstacles between the remote control and the IR sensor on the projector that might obstruct the infra-red beam.
Replacing the remote control battery

1. To open the battery cover, turn the remote control over to view its back, push on the finger grip on the cover and slide it up in the direction of the arrow as illustrated. The cover will slide off.
2. Remove any existing batteries (if necessary) and install two AAA batteries observing the battery polarities as indicated in the base of the battery compartment. Positive (+) goes to positive and negative (-) goes to negative.
3. Refit the cover by aligning it with the base and sliding it back down into position. Stop when it clicks into place.
✐ Caution:

- Avoid excessive heat and humidity.
- There may be battery damage if the battery is incorrectly replaced.
- Replace only with the same or equivalent type recommended by the battery manufacturer.
- Dispose of the used battery according to the battery manufacturer's instructions.
- Never throw a battery into a fire. There may be danger of an explosion.
- If the battery is dead or if you will not be using the remote control for a long time, remove the battery to prevent damage to the remote control from possible battery leakage.

Installation

Evaluate for distance by image size

Obtaining a preferred projected image size

The distance from the projector lens to the screen, the zoom setting (if available), and the video format each factors in the projected image size.

Projection dimensions

Refer to for the center of lens dimensions of this projector before calculating the appropriate position.
LX785_XGA

300	7620	6461	4038	7430	9852	12275	605

✎ Note:

- There is 5% tolerance among these numbers due to optical component variations. BenQ recommends that if you intend to permanently install the projector, you should physically test the projection size and distance using the actual projector before you permanently install it, so as to make allowance for this projector's optical characteristics. This will help you determine the exact mounting position so that it best suits your installation location.
- To optimize the projection quality, we suggest to project images in an area without grayscale.

Adjusting by Lens shift

Horizontal lens shift lever

Vertical lens shift lever
The Lens Shift function can be used to adjust the position of the projected image either horizontally or vertically within the range detailed below.

Adjusting the vertical image position

The vertical image height can be adjusted between 121% +12.3%/-2.2% for LX785 and 115% +10%/-2% for LU785 of offset position. Please consult the Lens Shift Range diagram below for further clarification.

Adjusting the horizontal image position

With the lens in the center position the horizontal image position can be adjusted between +/-3.2% for LX785 and +/-2.5% for LU785. Please consult the Lens Shift Range diagram below for further clarification.

Note:

Image quality is assured only within the listed lens shift range.

Caution:

• If you hear a "clicking sound" during the adjustment, it means that the knob is past its adjustment limit. Please stop adjusting it, in order to avoid any unexpected damage, and turn the knob in the opposite direction, at least to one step before the click.
• If you can't turn it back, please press and turn the knob back at same time.

Installing the side filter

Filter is an optional accessary. After you installing the filter, do the following procedures to start filter timing:
After the startup logo, open the On-Screen Display (OSD) menu. Go to the **SYSTEM SETUP: Basic > Operation Settings > Filter Settings** menu. Press **ENTER**. The Filter Settings page displays. Highlight **Filter Timer**. Press ◄/► to select **On** and press **ENTER**.

Connection

Before connecting

- Before connecting, carefully read the operating instructions for connecting the external device
- Turn off the power to all devices before connecting cables.
- Take note of the following before connecting cables. Failure to do so may result in malfunctions.
  - Before connecting a cable to the projector or to a device that is connected to the projector, touch any nearby metallic objects to remove any static electricity from your body.
  - Do not use unnecessarily long cables to connect the projector or a device to the projector. Using a longer cable that is wound makes it act like an antenna, making it more susceptible to noise.
  - When connecting cables, connect GND first and then insert the connecting terminal of the connecting device.
- Acquire any connection cables necessary to connect external devices to the system that are not supplied.
- The images on the screen may wobble if the video signal contains too much jitter. In this case, a time base corrector (TBC) must be connected.
- If synchronization signal outputs from computers or video equipment are disrupted due to changes in the video output settings or any other reasons, the colors of projected images may be temporarily disrupted.
- The projector accepts video signals, Y/C signals, YCBCR/YPBPR signals, analog RGB signals (synchronization signals are TTL level), and digital signals.
- Some computer models are not compatible with the projector.
- Use a cable compensator when you connect devices to the projector with long cables. If a cable compensator is not used, the image may not display properly.

Connecting video source devices

You need only connect the projector to a video source device using just one of the connecting methods, however each provides a different level of video quality. The method you choose will most likely depend upon the availability of matching terminals on both the projector and the video source device as described below:

Terminal Name	Terminal Appearance	Picture Quality
HDMI	HDMI 1 HDMI 2 HDMI 3/MHL	Best
Component Video	PC	Better
Video	VIDEO	Normal

Connecting audio

The projector has one built-in mono speaker which are designed to provide basic audio functionality accompanying data presentations for business purposes only. They are not designed for, nor intended for stereo audio reproduction use as might be expected in home theater or home cinema applications. Any stereo audio input (if provided), is mixed into a common mono audio output through the projector speaker.
The built-in speaker will be muted when the **AUDIO OUT** jack is connected.

✎ Note:

- The projector is only capable of playing mixed mono audio, even if a stereo audio input is connected. See "Connecting audio" on page 27 for details.
- If the selected video image is not displayed after the projector is turned on and the correct video source has been selected, check that the video source device is turned on and operating correctly. Also check that the signal cables have been connected correctly.

Playing sound through the projector

You can make use of the projector (mixed mono) speaker in your presentations, and also connect separate amplified speakers to the AUDIO OUT socket of the projector.
If you have a separate sound system, you will most likely want to connect the audio output of your Video source device to that sound system, instead of to the mono audio projector.
Once connected, the audio can be controlled by the projector On-Screen Display (OSD) menus. The table below describes the connection methods for different devices, and where the sound is from.

Device	PC	Component/Video	HDMI-1/HDMI-2
Audio input port	AUDIO IN (mini jack)	AUDIO (L/R)	HDMI
The projector can play the sound from...	AUDIO IN (mini jack)	AUDIO (L/R)	HDMI
Audio output port	AUDIO OUT	AUDIO OUT	AUDIO OUT
The selected input signal determines which sound will be played by the projector speaker, and which sound will be output from the projector when AUDIO OUT is connected. If you select the PC signal, the projector can play the sound received from AUDIO IN mini jack. If you select the VIDEO signal, the projector can play the sound received from AUDIO (L/R).			

Connecting smart devices

The projector can also project the content directly from your personal device(phone, tablet, NB) through optional BenQ wireless solution such as Qcast dongle or InstaShow™.
Please consult to your local agent if you're interested in it.

Operations

Switch on/off the projector

Connecting the power cord

Plug the power cord into the projector and into a wall socket. Turn on the wall socket switch (where fitted). Check that the POWER indicator light on the projector lights orange after power has been applied.
🖉 **Caution:**

Please use the original accessories (e.g. power cable) only with the device to avoid possible dangers such as electric shock and fire.

Power indicator

POWER	TEMP	LIGHT	Status
Orange	-	-	Stand-by
Green Flashing	-	-	Powering up
Green	-	-	Normal operation
Orange Flashing	-	-	Normal power down cooling

Switch on the projector

Press ⏻ **POWER** on the projector or **ON** on the remote control to start the projector and a start up tone sounds. The **POWER** indicator light flashes green and stays green when the projector is on.

The start up procedure takes about 30 seconds. In the later stage of start up, a startup logo is projected.

(If necessary) Rotate the focus ring to adjust the image clarity.
Select language

To use the OSD menus, please set them to your familiar language first.

Please Select Language			
English	한국어	Hrvatski	हिन्दी
Français	Svenska	Română

2. Use ◄/► to highlight the **System Setup: Basic** menu.
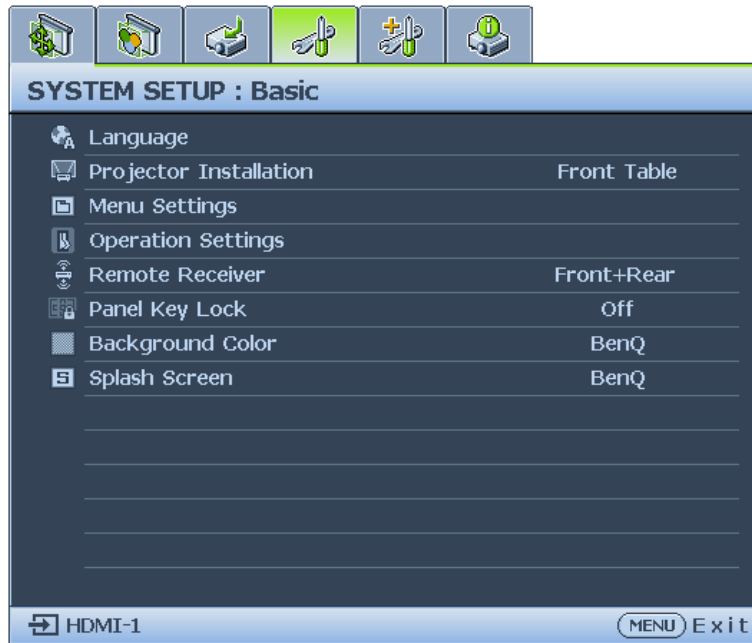

3. Press ▼ to highlight **Language** and press **ENTER** to select a preferred language.

4. Press **ENTER** twice* on the projector or remote control to leave and save the settings.
   *The first press leads you back to the main menu and the second press closes the OSD menu.

Using the OSD

Choosing a location

Your projector is designed to be installed in one of four possible installation locations:

1. **Front Table**

   Select this location with the projector placed on a table in front of the screen. This is the most common way to position the projector for quick setup and portability.
2. **Rear Table**

   Select this location with the projector placed on a table behind the screen.
   Note that a special rear projection screen is required.
   *Set **Rear Table** in the **SYSTEM SETUP: Basic** > **Projector Installation** menu after you turn the projector on.
3. **Front Ceiling**

   Select this location with the projector suspended upside-down from the ceiling in front of the screen.
   Purchase the BenQ Projector Ceiling Mounting Kit from your dealer to mount your projector on the ceiling.
   *Set **Front Ceiling** in the **SYSTEM SETUP: Basic** > **Projector Installation** menu after you turn the projector on.
4. Rear Ceiling

   Select this location with the projector suspended upside-down from the ceiling behind the screen.
   Note that a special rear projection screen and the BenQ Projector Ceiling Mounting Kit are required for this installation location.
   *Set **Rear Ceiling** in the **SYSTEM SETUP: Basic** > **Projector Installation** menu after you turn the projector on.
Your room layout or personal preference will dictate which installation location you select. Take into consideration the size and position of your screen, the location of a suitable power outlet, as well as the location and distance between the projector and the rest of your equipment.

Using test pattern

The projector is capable of displaying the grid test pattern. It can be used to assist you with the adjustment of image size and focus, ensuring that the projected image is free from distortion.
To display the test pattern, open the OSD menu and go to the **System Setup: Advanced** > **Test Pattern** and press ◄/► to select On.
Adjusting by corner fit

Manually adjust four corners of the image by setting the horizontal and vertical values.
Using the OSD menu
1. Press **MENU** and then press ◄/► until the **Display** menu is highlighted.
2. Press ▼ to highlight **Corner Fit** and press **ENTER**. The **Corner Fit** page displays.
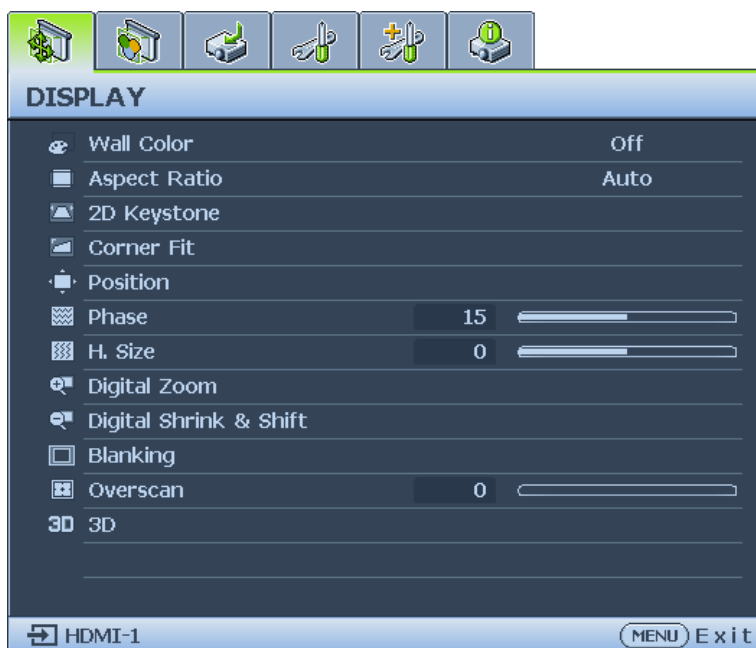

3. Press ▲/▼/◄/► to select one of the four corners and press **ENTER**.

Corner Fit

(Enter) Enter   (MENU) Back
4. Press ▲/▼ to adjust vertical values from 0 to 60.
5. Press ◄/► to adjust horizontal values from 0 to 60.

(Enter) Reset   (MENU) Back
Auto adjusting the image

In some cases, you may need to optimize the picture quality. To do this, press **AUTO** on the projector or remote control. Within 3 seconds, the built-in Intelligent Auto Adjustment function will re-adjust the values of Frequency and Clock to provide the best picture quality.
The current source information will be displayed in the upper left corner of the screen for 3 seconds.

Note:

• The screen will be blank while AUTO is functioning.
• This function is only available when PC signal (analog RGB) is selected.

Fine turning the image size and clarity

1. Adjust the projected image to the size that you need using the ZOOM ring.
2. Sharpen the image by rotating the FOCUS ring.

Zoom ring
Focus ring
Switch off the projector

1. Press ⏻ **POWER** or **OFF** and a confirmation message will appear prompting you.
    If you don't respond in a few seconds, the message will disappear.
2. Press ⏻ **POWER** or **OFF** a second time. The **POWER** indicator light flashes orange, the projection light source shuts down.
3. Once the cooling process finishes. The **POWER** indicator light is a steady orange and fans stop. Disconnect the power cord from the power outlet.

   ✏️ **Caution:**

*   To protect the light source, the projector will not respond to any commands during the cooling process.
*   Press ⏻ **POWER** or **ON** again to start the projector after the **POWER** indicator light turns orange.

Controlling the projector through a Wired LAN environment

Wired LAN allows you to manage the projector from a computer using a web browser when the computer and the projector are properly connected to the same local area network.
Configuring the Wired LAN

If you are in a DHCP environment:

1. Take a RJ45 cable and connect one end to the RJ45 LAN input jack of the projector and the other end to the RJ45 port.

Note:

When connecting the RJ45 cable, avoid coiling and intertwining the cable as it may cause signal noise or interruption.

2. Press **MENU/EXIT** and then press ◄/► until the **System Setup: Advanced** menu is highlighted.
3. Press ▼ to highlight **Network Settings** and press **MODE/ENTER**. The Network Settings page is displayed.
4. Press ▼ to highlight **Wired LAN** and press **MODE/ENTER**. The Wired LAN page is displayed.
5. Press ▼ to highlight **DHCP** and press ◄/► to select **On**.
6. Please wait for around 15 - 20 seconds, and then re-enter the Wired LAN page.
7. The **IP Address**, **Subnet Mask**, **Default Gateway**, and **DNS Server** settings will be displayed. Note down the IP address displayed in the **IP Address** row.

Note:

If the IP Address still does not display, contact your ITS administrator.

8. Go back to **System Setup: Advanced > Network Settings** page.
9. Press ▼ to highlight **AMX Device Discovery** and press ◄/► to select **On** or **Off**. When **AMX Device Discovery** is **On**, the projector can be detected by AMX controller.

If you are in a non-DHCP environment:

1. Repeat steps 1-4 above.
2. Press ▼ to highlight **DHCP** and press ◄/► to select **Off**.
3. Contact your ITS administrator for information on the **IP Address**, **Subnet Mask**, **Default Gateway**, and **DNS Server** settings.
4. Press ▼ to select the item you want to modify and press **MODE/ENTER**.

WIRED LAN	
Status	Connect
DHCP	Off
IP Address	◄ 10.10.10.10 ►
Subnet Mask	255.255.255.0
Default Gateway	0.0.0.0
DNS Server	0.0.0.0
Apply	
	(MENU) Back

5. Press ◄/► to move the cursor and then press ▲/▼ to enter the value.

IP Address	255	.	255	.	10	.	10

6. To save the setting, press **MODE/ENTER**. If you do not want to save the setting, press **MENU/EXIT**.
7. Press ▼ to highlight **Apply** and press **MODE/ENTER**.
8. Press **MENU/EXIT** to return to Network Settings page, press ▼ to highlight **AMX Device Discovery** and press ◄/► to select **On** or **Off**.
9. Press **MENU/EXIT** to exit the menu.

Controlling the projector remotely through a web browser

As Adobe will no longer support Flash Player after December 31 2020, access to Flash Player will be removed from all browsers gradually, including Internet Explorer and Google Chrome. As a result, the Crestron RoomView service from BenQ, which is Flash-based, will also be discontinued. BenQ suggests using the following alternatives to manage and monitor multiple projectors.

1. Crestron RoomView Express: this software can be downloaded from Crestron's official website. https://www.crestron.com/resources/get-roomview
2. BenQ DMS Local: this software can be downloaded from the official BenQ website. Please reach out to BenQ service for further assistance with installation if needed. https://www.benq.com/en-us/business/projector/dms-local.html

1	To switch input source, click on your desired signal. **Note:** The source list varies according to the connectors available on the projector. "Video" stands for the Video signal.	
2	Menu Auto PC Blank Input ▲ (▼) ▼ (▲) ◄ (🔊) ► (🔊))	See "Remote control" on page 16 for details.
	OK	Activates the selected On-Screen Display (OSD) menu item.

The tools page allows you to manage the projector, configure the LAN control settings and secure access of remote network operation on this projector.

1. You can name the projector, keep track of its location and the person in charge of it.
2. You can adjust the **LAN Control Settings**.
3. Once set, access to the remote network operation on this projector has been password protected.
4. Once set, access to the tools page has been password-protected.
5. Press **Exit** to go back to the remote network operation page.

Note:

After making the adjustments, press the Send button and the data will be saved in the projector.

Please pay attention to the limitation of input length (including space and other punctuation keys) in the list blow:

Category item	Input length	Maximum number of characters
Crestron Control	IP Address	15
	IP ID	4
	Port	5
Projector	Projector Name	22
	Location	22
	Assigned To	(N/A)
Network Configuration	DHCP (Enabled)	15
	IP Address	15
	Subnet Mask	15
	Default Gateway	15
	DNS Server	(N/A)
User Password	Enabled	(N/A)
	New Password	15
	Confirm	15
Admin Password	Enabled	(N/A)
	New Password	15
	Confirm	15

The info page displays the information and status of this projector. Press Exit to go back to the remote network operation page.

Press **Exit** to go back to the remote network operation page.

For more information, visit http://www.crestron.com & www.crestron.com/getroomview.

Using the menu

Main menu

The projector is equipped with On-Screen Display (OSD) menus for making various adjustments and settings.

Below is the overview of the OSD menu.

HDMI-1   (MENU) Exit
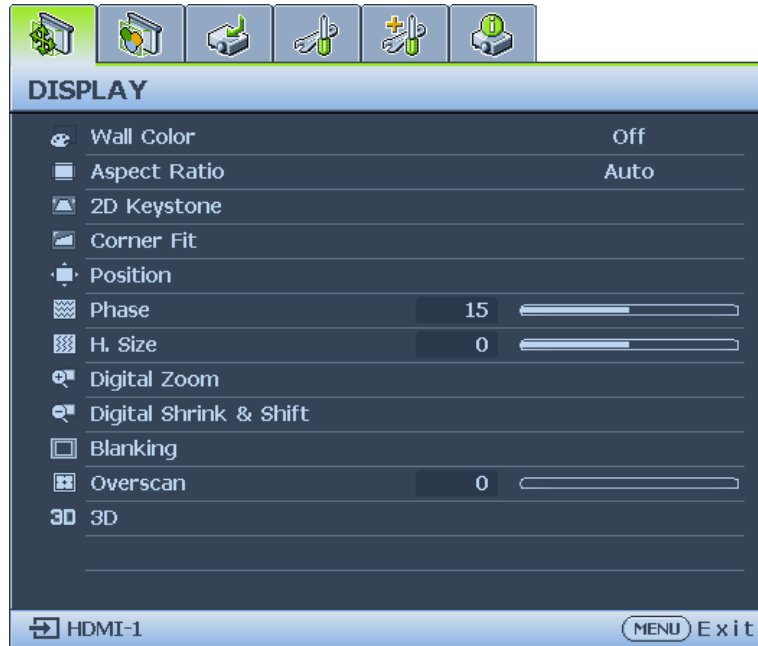

- **Wall Color**

  Adjusts the color settings of the image to suit the color of the wall on which the image is projected. The options are Off, Light Yellow, Pink, Light Green, Blue and Blackboard.

- **Aspect Ratio**

  Press ◄/► to adjust the aspect of the projected image. The options are Auto, Real, 4:3, 16:9 and 16:10.

  - Using the remote control
  1. Press **ASPECT** to show the current setting.
  2. Press **ASPECT** repeatedly to select an aspect ratio to suit the format of the video signal and your display requirements.

1. **Auto:** Scales an image proportionally to fit the projector's native resolution in its horizontal width. This is suitable for the incoming image which is neither in 4:3 nor 16:9 and you want to make most use of the screen without altering the image's aspect ratio.

   15:9 picture
2. **Real:** The image is projected as its original resolution, and resized to fit within the display area. For input signals with lower resolutions, the projected image will display smaller than if resized to full screen. You could adjust the zoom setting or move the projector away from the screen to increase the image size if necessary. You may also need to refocus the projector after making these adjustments.

   4:3 picture

   16:9 picture
3. **4:3:** Scales an image so that it is displayed in the center of the screen with a 4:3 aspect ratio. This is most suitable for 4:3 images like computer monitors, standard definition TV and 4:3 images aspect DVD movies, as it displays them without aspect alteration.

   4:3 picture
4. **16:9:** Scales an image so that it is displayed in the center of the screen with a 16:9 aspect ratio. This is most suitable for images which are already in a 16:9 aspect, like high definition TV, as it displays them without aspect alteration.

16:9 picture

5. **16:10:** Scales an image so that it is displayed in the center of the screen with a 16:10 aspect ratio. This is most suitable for images which are already in a 16:10 aspect, as it displays them without aspect alteration.

16:10 picture
- **2D Keystone**
  Press **ENTER** and press ▲/▼/◄/► to adjust horizontal or vertical distortion brought by the projection angle.

- **Corner Fit**
  Press **ENTER** to enter the **Corner Fit** menu. See "Corner Fit menu" on page 44 for more details.

- **Position**
  Press **ENTER** and press ▲/▼/◄/► to adjust the position of the projectored picture.

- **Phase**
  Press ◄/► to adjust Phase for the projectored picture.

- **H. Size**
  Press ◄/► to adjust H. Size for the projectored picture.

- **Digital Zoom**
  Press ◄/► to enlarge the projected image.

- **Digital Shrink & Shift**
  Press **ENTER** to enter the **Digital Shrink & Shift** menu. See "Digital Shrink & Shift menu" on page 44 for more details.

- **Blanking**
  Press **ENTER** to enter the **Blanking** menu. See "Blanking menu" on page 45 for more details.

- **Overscan**
  Press ◄/► to hide edge of the projected image to damage the noise appear.

- **3D**
  Press **ENTER** to enter the **3D** menu. See "3D menu" on page 45 for more details.

HDMI-1   (MENU) E x i t

- **Picture Mode**
  Press ◄/► to select a picture mode. The options are Bright, Presentation, sRGB, Vivid, Cinema, Infographic, 3D, User 1 and User 2.
  - **Bright mode:** Maximizes the brightness of the projected image. This mode is suitable for environments where extra-high brightness is required, such as using the projector in well lit rooms.
  - **Presentation mode:** Is designed for presentation. The brightness is emphasized in this mode to match PC and notebook coloring.
  - **sRGB mode:** Maximizes the purity of RGB colors to provide true-to-life images regardless of brightness setting. It is most suitable for viewing photos taken with an sRGB compatible and properly calibrated camera, and for viewing PC graphic and drawing applications such as AutoCAD.
  - **Vivid mode:** Is appropriate for playing colorful movies, video clips from digital cameras or DVs through the PC input for best viewing in a blackened (dimly lit) environment.
  - **Cinema mode:** Is appropriate for playing colorful movies, video clips from digital cameras or DVs through the PC input for best viewing in a blackened (dimly lit) environment.
  - **Infographic:** Is perfect for presentations with the mixture of text and graphics due to its high color brightness and better color gradation to see the details clearly.
  - **3D mode:** Is appropriate for playing 3D images and 3D video clips.
  - **User 1/User 2 mode:** Recalls the settings customized based on the current available picture modes.

- **Reference Mode**
  Press ◄/► to select a reference mode. The options are Bright, Presentation, sRGB, Vivid, Cinema, Infographic and 3D.

- **Brightness**
  Press ◄/► to adjust the brightness of the projected image.
  The higher the value, the brighter the image. And lower the setting, darker the image. Adjust this control so the black areas of the image appear just as black and that detail in the dark areas is visible.
Contrast

Press ◄/► to adjust the contrast of the projected image.

The higher the value, the greater the contrast. Use this to set the peak white level after you have previously adjusted the Brightness setting to suit your selected input and viewing environment.

- **Color**

  Press ◄/► to adjust the color saturation.

  Lower setting produces less saturated colors. If the setting is too high, colors on the image will be overpowering, which makes the image unrealistic.

- **Tint**

  Press ◄/► to adjust the tint of the projected image.

  The higher the value, the more reddish the picture becomes. The lower the value, the more greenish the picture becomes.

- **Sharpness**

  Press ◄/► to adjust the display sharpness of the projected image.

  The higher the value, the sharper the picture becomes. The lower the value, the softer the picture becomes.

- **Brilliant Color**

  Press ◄/► to adjust the brilliant color of the projected image.

  This feature utilizes a new color-processing algorithm and system level enhancements to enable higher brightness while providing truer, more vibrant colors in picture. It enables a greater than 50% brightness increase in mid-tone images, which are common in video and natural scenes, so the projector reproduces images in realistic and true colors. If you prefer images with that quality, select **On**. If you don't need it, select **Off**.

  When **Off** is selected, the **Color Temperature** function is not available.

- **Gamma Selection**

  Press ◄/► to select the relationship between input source and picture brightness.

- **Color Temperature**

  Press ◄/► to adjust the color temperature. The options are Cool, Normal and Warm.

  - **Cool:** makes the image appear bluish white.
  - **Normal:** Maintains normal colorings for white.
  - **Warm:** Makes images appear reddish white.

- **Color Temperature Fine Tuning**

  Press **ENTER** to enter the **Color Temperature Fine Tuning** menu. See "Color Temperature Fine Tuning menu" on page 48 for more details.

- **3D Color Management**
  Press **ENTER** to enter the **3D Color Management** menu. See "3D Color Management menu" on page 49 for more details.
- **Reset Picture Settings**
  Press **ENTER** to enter the **Reset Picture Settings** menu. Press ▲/▼ and press **ENTER** to set to the default value.
    - **Current:** Returns current picture mode to the factory preset settings.
    - **All:** Returns all settings, except User 1/User 2 in the Picture menu to the factory preset settings.

  Press **ENTER** to enter the **Saturation** menu. Press ▲/▼/◄/► to adjust settings.
- **Gain**
  Press **ENTER** to enter the **Gain** menu. Press ▲/▼/◄/► to adjust settings.

3D Color Management

In most installation situations, color management will not be necessary, such as in classroom, meeting room, or lounge room situations where lights remain on, or where building external windows allow daylight into the room.

Only in permanent installations with controlled lighting levels such as boardrooms, lecture theaters, or home theaters, should color management be considered. Color management provides fine color control adjustment to allow for more accurate color reproduction, should you require it.

Proper color management can only be achieved under controlled and reproducible viewing conditions. You will need to use a colorimeter (color light meter), and provide a set of suitable source images to measure color reproduction. These tools are not provided with the projector, however, your projector supplier should be able to provide you with suitable guidance, or even an experienced professional installer.

The Color Management provides six sets (RGBCMY) of colors to be adjusted. When you select each color, you can independently adjust its range and saturation according to your preference.

If you have purchased a test disc which contains various color test patterns and can be used to test the color presentation on monitors, TVs, projectors, etc. You can project any image from the disc on the screen and enter the 3D Color Management menu to make adjustments.

To adjust the settings:
1. Go to the **Picture** menu and highlight **3D Color Management**.
2. Press **ENTER** and the 3D Color Management page displays.
3. Highlight **Primary color** and press ◄/► to select a color from among Red, Green, Blue, Cyan, Magenta and Yellow.
4. Press ▼ to highlight **Hue** and press ◄/► to select its range. Increase in the range will include colors consisted of more proportions of its two adjacent colors.
Please refer to the illustration to the right for how the colors relate to each other.
For example, if you select Red and set its range at 0, only pure red in the projected picture will be selected. Increasing its range will include red close to yellow and red close to magenta.

5. Press ▼ to highlight **Saturation** and adjust its values to your preference by press ◄/►.
Every adjustment made will reflect to the image immediately.
For example, if you select Red and set its value at 0, only the saturation of pure red will be affected.

Maintenance

Before maintaining the projector

- Make sure to turn off the power before maintaining the projector.
- When switching off the projector, make sure to follow the procedures in "Switch off the projector" on page 35.

Care of the projector

Your projector needs little maintenance. The only thing you need to do on a regular basis is to keep the lens clean.

Never remove any parts of the projector. Contact your dealer if other parts need replacing.

Clean the lens front surface

Clean the lens whenever you notice dirt or dust on the surface.

- Use a canister of compressed air to remove dust.
- If there is dirt or smears, use lens-cleaning paper or moisten a soft cloth with lens cleaner and gently wipe the lens surface.

🖉 Caution:

Never use any type of abrasive pad, alkaline/acid cleaner, scouring powder, or volatile solvent, such as alcohol, benzene, thinner or insecticide. Using such materials or maintaining prolonged contact with rubber or vinyl materials may result in damage to the projector surface and cabinet material.

Clean the projector case

Before you clean the case, turn the projector off using the proper shutdown procedure as described in "Switch off the projector" on page 35 and unplug the power cord.

- To remove dirt or dust, wipe the case with a soft, lint-free cloth.
- To remove stubborn dirt or stains, moisten a soft cloth with water and a neutral pH detergent. Then wipe the case.

🖉 Caution:

Never use wax, alcohol, benzene, thinner or other chemical detergents. These can damage the case.

Filter maintenance

Cleaning the filter

The air filter prevents dust from accumulating on the surface of the optical elements inside the projector. If the filter is dirty or clogged, your projector may overheat or degrading the projected image quality.

1. Turn off the projector, and unplug the AC power cord from the AC outlet.
2. Cleaning the filter with a vacuum cleaner.
✎ Caution:

Recommend avoiding dusty or smoky environments when you operate the projector, it may cause poor image quality. If the filter is heavily clogged and unable to clean, replace a new filter.

✎ Note:

Using a ladder is recommended to access the filter. Do not remove the projector from the wall mount.

Replacing the side filter

1. Turn off the projector and unplug the power cord from the outlet. Remove any dust on the projector and around the air vents. Remove the filter cover.

2. Remove the filter from the filter cover.

3. Align the holes on the new filter with the hooks on the filter cover.
4. Replace the filter cover onto the projector by pushing gently in the direction shown.
Note:

Do not wash the filter with the water or other liquid matter.

Resetting the filter timer

5. After the startup logo, open the On-Screen Display (OSD) menu. Go to the **SYSTEM SETUP: Basic > Operation Settings > Filter Settings** menu. Press **ENTER**. The Filter Settings page displays. Highlight **Reset Filter Timer**. A warning message displays asking if you want to reset the filter timer. Highlight **Reset** and press **ENTER**. The filter time will be reset to '0'.

Troubleshooting

Troubleshooting

The projector does not turn on.

Cause	Remedy
There is no power from the power cable.	Plug the power cord into the AC inlet on the projector, and plug the power cord into the power outlet. If the power outlet has a switch, make sure that it is switched on.
Attempting to turn the projector on again during the cooling process.	Wait until the cooling down process has completed.

No picture.

Cause	Remedy
The video source is not turned on or connected correctly.	Turn the video source on and check that the signal cable is connected correctly.
The projector is not correctly connected to the input signal device.	Check the connection.
The input signal has not been correctly selected.	Select the correct input signal with the SOURCE key on the projector or remote control.

Blurred image.

Cause	Remedy
The projection lens is not correctly focused.	Adjust the focus of the lens using the focus ring.
The projector and the screen are not aligned properly.	Adjust the projection angle and direction as well as the height of the unit if necessary.

Remote control does not work.

Cause	Remedy
The battery is out of power.	Replace the battery with new one.
There is an obstacle between the remote control and the projector.	Remove the obstacle.
You are too far away from the projector.	Stand within 7 meters (23 feet) of the projector.

The password is incorrect.

Cause	Remedy
You do not remember the password.	1. Press and hold **AUTO** on the projector or remote control for 3 seconds. The projector will display a coded number on the screen. 2. Write down the number and turn off your projector. 3. Seek help from the local BenQ service center to decode the number. You may be required to provide proof of purchase documentation to verify that you are an authorized user of the projector.

Mechanical

Weight
    23.6 lbs (10.7 Kg) (without lens)

Output terminals

Speaker
    5 watt x 2 (peak to peak)
Audio signal output
    Mini jack x 1
Monitor Out
    D-Sub 15-pin (female) x1
    (for computer 1 only)
USB
    TYPE-A (5V/1.5A)
3D SYNC x 1

Control

USB
    Mini type-B x 1
RS-232 serial control
    9 pin x 1
IR receiver x 2
LAN control
    RJ45 x 1 (10/100 Mbps)

Input terminals

Computer input
    RGB input
        D-Sub 15-pin (female) x 1
    VIDEO
        RCA jack x 1
    SD/HDTV signal input
        Digital - HDMI 1 x 1
                HDMI 2 x 1
                HDMI 3/MHL x 1
Audio signal input
    Audio in
        PC audio jack x 1
        RCA audio jack (L/R) x 1

Environmental Requirements

Operating temperature
    0°C–40°C at sea level
Operating relative humidity
    10%–90% (without condensation)
Operating altitude
    0–1499 m at 0°C–35°C
   1500–3000 m at 0°C–30°C (with High
   Altitude Mode on)
Storage temperature
    -20°C–60°C
Storage humidity
    10%–90% RH (without condensation)

Note:

All specifications are subject to change without notice.

PJLink

PJLink protocal

The network function of this projector support the PJLink class 1, and the PJLink protocal can be used to perform projector setting and projector status query operations from a computer.

Control commands

The following table lists the PJLink protocal commands that can be used to control the projector.

- x characters in table are non-specific characters.

Command	Control Details	Parameter/ Return String	Remark		
POWR	Power supply control	0	Standby		
		1	Power on		
POWR?	Power supply status query	0	Standby		
		1	Power on		
INPT	Input selection	11	PC1 / YPbPr1		
INPT?	Input status query	21	VIDEO		
		31	HDMI1		
		32	HDMI2		
		33	HDMI3 / MHL		
AVMT	Mute	11	Video mute On		
AVMT?	Mute query	10	Video mute Off		
		21	Audio mute On		
		20	Audio mute Off		
		31	Video & Audio mute On		
		30	Video & Audio mute Off		
ERST?	Error status query	xxxxxx	1st byte	Indicates fan errors, and returns 0 - 2	0 = No error is detected 1 = Warning 2 = Error
			2nd byte	Indicates light source errors, and returns 0 - 2	
			3rd byte	Indicates temperature errors, and returns 0 - 2	
			4th byte	Return 0	
			5th byte	Return 0	
			6th byte	Indicates other errors, and returns 0 - 2	
LAMP?	Light source status query	xxxxxxxxxxxx	1st number (1-5 digitals): Light source 1 runtime		
INST?	Input selection list query	11 21 31 32 33	LX785/ LU785		

Command	Control Details	Parameter/Return String	Remark
NAME?	Projector name query	xxxxx	Returns the name set in [PROJECTOR NAME] of [NETWORK SETUP]
INF1?	Manufacturer name query	BenQ	Returns manufacturer name
INF2?	Model name query	LX785/ LU785	Returns moder name
INF0?	Other information queries	xxxxx	Returns information such as version number
CLASS?	Class information query	I	Returns class for PJLink
