

## celexon electric laser TV drawer

### DESCRIPTION:

The celexon laser TV drawer offers an optimal solution for achieving the correct distance for your projector without needing to modify your furniture. The fully electronic drawer allows for precise positioning of your laser TV.

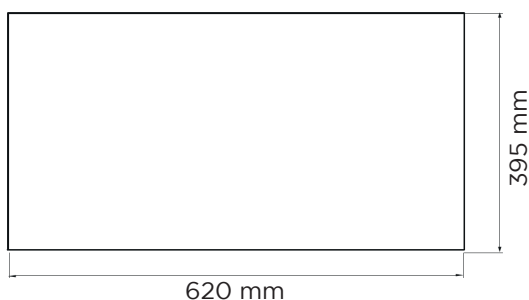

High-quality industrial-grade linear guides ensure a permanent and accurate image alignment. These prevent „drifting“ of the final position and guarantee that the image always appears correctly on the screen. The mechanism and electronics of the drawer are designed to remain stable even after many years of intensive use, ensuring the projector’s position is always adjusted with millimeter precision.

Thanks to the built-in sync trigger module, the entire laser TV can be easily automated. The projector controls the screen and the drawer simultaneously.

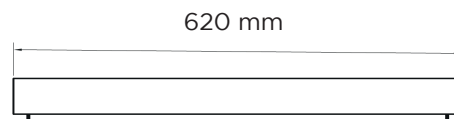

The cubistic design of the drawer enables discreet integration into your furniture, contributing to an elegant, minimalist appearance.
