

Lenovo ThinkSmart Bar 180

EMEA version May 2024

Today's hybrid workplace requires uncomplicated technology that naturally engages employees in effective collaboration—no matter where they are. Featuring a modern form factor and best-in-class AI-accelerated performance, Lenovo ThinkSmart Bar 180 is a premium conference bar that delivers a superior audio and visual experience. This stylish and easy-to-set-up meeting room bar transforms a small or medium meeting room into a next-generation collaboration space in no time at all.

The ThinkSmart Bar 180 creates a truly immersive meeting experience. With impressive AI features that follow the conversation and adjust the view and audio, this smarter conference bar allows remote participants to feel like they're sitting around the table, even if they're across the world.

Lenovo ThinkSmart Bar 180

PREMIUM SIGHT & SOUND

With the three-camera system and a unique 180° field of view, the Lenovo ThinkSmart Bar 180 delivers wall-to-wall room coverage for small and medium collaboration spaces. High-fidelity audio means every participant can hear and be heard clearly. Plus, this exceptional audiovisual solution is plug and play—easily installed with a single-cable.

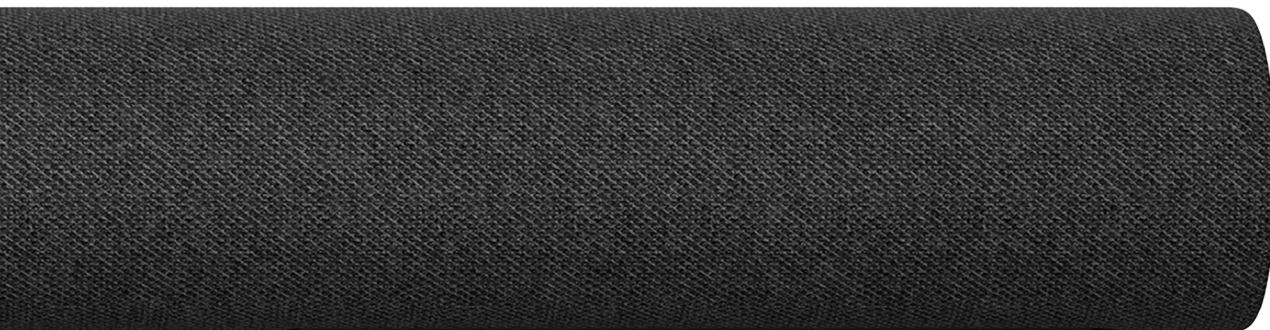

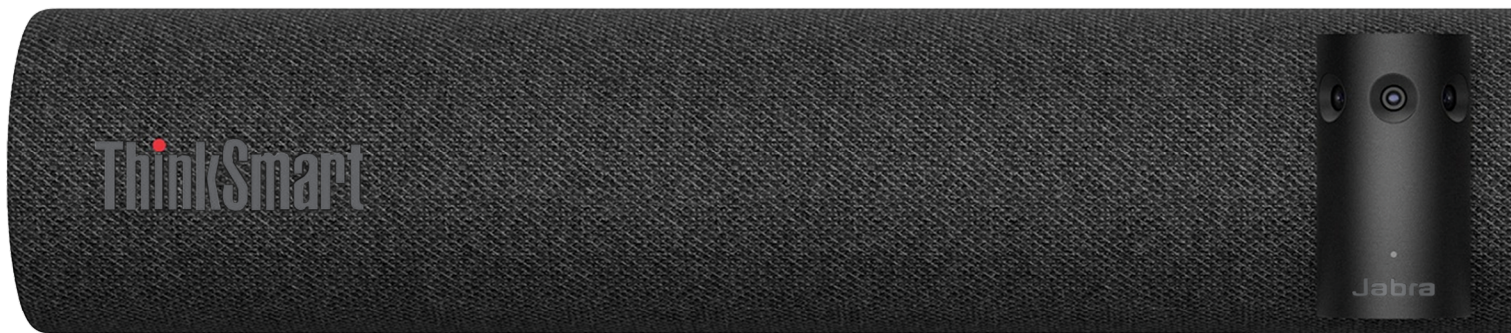

IMMERSIVE EXPERIENCE

Precision voice detection identifies voices of up to 10 speakers so every participant can hear and be heard clearly, while also enabling intelligent speech features like live transcription. For optimal brainstorming and collaboration, the Lenovo ThinkSmart Bar 180 offers real-time whiteboard capture and streaming, simultaneously displaying whiteboard content and in-room participants—no additional content camera needed.

NATURAL ENGAGEMENT

Impressive AI features create natural engagement, whether participants are around the table or across the globe. For instance, Dynamic Composition automatically detects up to four people/clusters in the room, with prioritization given to recent speakers, and Intelligent Zoom dynamically adjusts framing for optimal views as people move about the room. Speaker transitions are never an issue, thanks to Virtual Director that follows the conversation, zooming in to active speakers.
