

SMS Precision Projector CM V

Keeps heavy projectors in the right position at any height.

Extend the telescopic arm to a freely chosen length and adjust the image simply and accurately with the aid of the ingenious joint, which can hold heavy projectors secure in the selected position. Fine adjustment, including tilt, is made directly at the projector bracket, without the need for any tools. This minimises the need for image adjustment using the projector, and gives significantly more rapid and easier installation. Cables are concealed in the cable holder of the column and a white cover plate is mounted last, when all cables are in place, for simple and nice-looking installation. Delivered with a universal slide that can be used with most heavy projectors.

A very stable solution that is also easy to service. Available in four versions that measure, when fully extended, 535, 735, 1235 and 1735 mm, respectively.

INFO

Finish: White

Maximum weight projector: 20 kg

Minimum weight projector: can vary, depending on the hole pattern on the backside of the projector.

Length: 385-535, 485-735, 735-1235 and 1235-1735 mm
